## The **Eriobox** technology !

Erio introduces this unit as the successor to the famous GESSOBOX. It maintains many of its characteristics but in addition introduces some novelties: the LED lamp and a micro-motor knee control holder as standard. Eriobox includes filters that assure a grade filtration "H" type and the motor box contains a new generation motor, powerful 1000w without brushes replacement. The unit can be equipped with optional accessories such as a magnifying lens and automatic start-stop suction which activates simultaneously when the micro-motor is switched on.

The dimensions are: 89x63x120 cm and the weight is 89 kg.
